

Firelce Shield[®] EMFIDS

Emergency Firelce Delivery System

A PATHWAY OUT

EMFIDS applies a dense, protective coating to the interior of the vault, the worker and the escape ladder in milliseconds, while immediately cooling the environment.

EMFIDS is a portable system that automatically detects and contains subsurface events, providing a critical and potentially life-saving pathway out in the event of an emergency. Powered by Firelce[®], EMFIDS is triggered in milliseconds by heat (fire), light (arc) or manually at the push of a portable magnetized emergency button.
